SUMMARY

Experience in software and product management roles, working on large-scale, customer-facing products and problem solving with data science and analytics. Passion for automating tasks to improve productivity. Proficient in tools such as:

Languages: SQL, Python, TypeScript, JavaScript, Golang

Technologies: Git, GitHub CoPilot, MCP, Azure DevOps, GCP, Docker, NoSQL, RDBMS, Apache Spark, React

EDUCATION

University of Waterloo

Sep 2020 - Apr 2025

Bachelor of Computer Science, Honours (Distinction)

- 3.8 GPA, Awards: Presidents Scholarship of Distinction, Dean's Honours List
- Courses: Machine Learning, AI, Distributed Systems, Big Data Analytics, Databases, Statistics, Algorithms, OOP

EXPERIENCE

CAAT Pension Plan

Aug 2025 - Present

Analyst, Application Portfolio & Governance / Azure, SQL, ServiceNow, CI/CD

Toronto, ON

- Built a survey platform hosted on Azure, featuring a PowerApps frontend, Microsoft authentication, Azure SQL database and API integrations to automate collection of technical and business metrics for 300+ enterprise applications.
- Implemented a data-driven application rationalization model using survey analytics to generate strategic fit metrics and visualizations for portfolio optimization, enabling the identification of \$100,000 in cost-saving opportunities.
- Designed a scalable Application Portfolio Management system using Azure and SQL, integrating ServiceNow CMDB data to centralize ownership, lifecycle and cost attributes for 300+ applications, enabling robust filtering and analysis.

Timeplay

Apr 2024 - Sep 2024

Product Developer / MongoDB, PostgreSQL, React

Toronto, ON

- Compiled and analyzed user interaction and payment data, providing dashboards for product and engineering teams to gain insight and develop new features, contributing to a 20% growth engagement across live-service mobile games.
- Developed a user-interaction data collection system with Python and SQL, created dashboards and a NoSQL database, and analyzed engagement impact of new frontend features, improving data-driven decision-making.
- Cleaned and optimized large NoSQL (MongoDB) databases and backend Golang services, reducing latency of RESTful APIs by 15%, and boosting reliability of web-applications depended on by end-users.

Environics Analytics

Apr 2023 - Sep 2023

Software Product Intern / SQL, Python, Alteryx, PostgreSQL

Toronto, ON

- Built, trained and monitored a French translation pipeline with Python, using Pandas/Numpy for parsing and cleaning large (100GB+) datasets, and iteratively trained an LLM model to translate products, saving ~\$40K per product.
- Developed a data-processing tool with Python (QT, Pandas), integrating SQL-based analytics for non-technical teams to extract and analyze customer product-usage data, enhancing decision-making and data visualization capabilities.
- Enhanced data infrastructure by structuring product and API usage insights into SQL Server databases, improving data accessibility and enabling a data-driven pricing strategy.

Martinrea International

Jan 2022 - Aug 2022

Student Engineer / PowerBI, Excel, SQL

Brampton, ON

- Built a supply chain monitoring system by using advanced Excel (VBA) and database querying to collect and analyze manufacturing and purchase data, providing alerts of potential shortages or surpluses, resulting in ~10k annual savings.
- Spearheaded the optimization of material-flow across the manufacturing plant, utilizing historic data from SQL databases to develop plan the project and generating reports with PowerBI, increasing output and cost efficiency by 30%.

PROJECTS

AI Audio Orchestration / Python, Azure OpenAI GPT-4, WebSockets, FastAPI

- Built a real-time audio streaming platform with a multi-stage AI pipeline: live audio is transcribed with trained models, then segmented into topics using BERT embeddings and cosine similarity detection, with each segment summarized live by GPT-4 via WebSocket. Deployed end-to-end for live broadcast use at radio stations.

Automated Restaurant Reservation Business / Go, Google Cloud

- Founded a service that secures reservations for clients at world-famous restaurants through email outreach and development with GoLang, generating ~\$3k in revenue per month.
- Deployed to Google-Cloud utilizing Scheduler for automated tasks, Task Manager for distributed execution and cloud-storage for saving user and transaction data; resulting in a scalable and efficient system.
